

The range of MMX ovens without pyrolytic function includes different clocks depending on each of the versions for the different models.

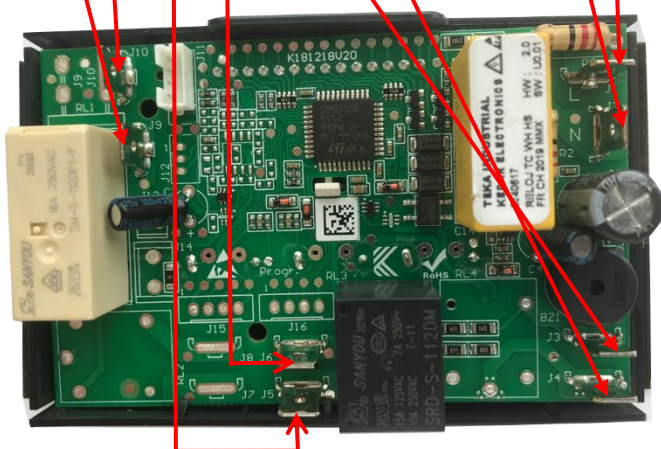

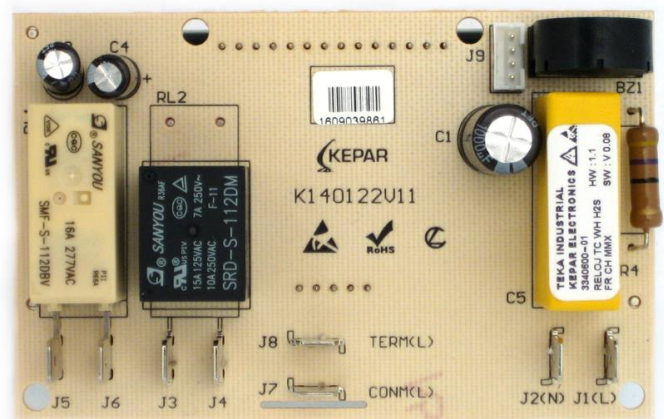

83340600 / 83340620 clocks connectors are located in the same area, and they are 100% compatible at HW and SW level (the only difference is the component supplier).

The three clock references we have (83340600 / 83340620 / 83340617) are fully interchangeable in both senses (see attached compatibility diagram).
